

Space Navigator™ for Notebooks

Navigate Your 3D World™

3D precision and comfort
you can take with you

3D portability

- A compact, lightweight 3D mouse you can take anywhere. Includes a stylish travel case.

Improved design

- New cap design makes 3D interactions more immersive.

Universal compatibility

- Works with your favorite 3D application, on any OS—Windows, Mac, or Linux.

3D for the road

Compact and ultra-light, SpaceNavigator for Notebooks is the perfect travel companion for 3D designers and enthusiasts. Unlike conventional mice limited to movement on two flat planes, SpaceNavigator for Notebooks supports effortless motion in all directions. You're now free to create awe-inspiring models or explore virtual worlds—without the limits imposed by outmoded “flatworld” technology.

SpaceNavigator for Notebooks revolutionizes 3D control with advanced pressure sensing technology that makes the 3D mouse a virtual extension of your body. Move the controller cap to simultaneously pan, zoom, and rotate on the fly, without stopping to select commands. Lightly increase pressure to go faster or decrease pressure to perform precise micro-adjustments.

3D portability

Designed for mobile professionals and enthusiasts, the compact SpaceNavigator for Notebooks is only half the weight of its desktop counterpart. The small footprint makes it easy to use—even on airline trays. A handsome travel case transports your 3D mouse in style.

Improved design

A new cap design increases comfort and makes your interactions with 3D models and environments more immersive and natural.

Universal compatibility

SpaceNavigator works with your favorite 3D application, on any OS—Windows, Mac, or Linux. Use it to build sophisticated models in all the leading design applications, power 3D presentations with Adobe Acrobat, or explore rich 3D worlds in Second Life, Google Earth, NASA World Wind, or Microsoft Virtual Earth.
