Electric Vehicle Manufacturer NEMO Adopts PTC's Product Development System

MONTREAL, QC - Aug 17, 2009 – BRT Solutions, Canada's source of PLM and product development solutions, today announced that NEMO, a leading Canadian manufacturer and developer of electric trucks has added Windchill and expanded its existing Pro/ENGINEER-based product development process in order to adopt a fully integrated product development system and help streamline its product development processes.

Based in Quebec, Canada, NEMO has staked out a unique position in the electric automotive industry by providing electric-powered, 1000lbs payload, trucks. NEMO has used Pro/ENGINEER to create a 3D engineering, virtual prototyping and design environment featuring the FEA and industrial design capabilities of Pro/ENGINEER. This engineering environment allowed their team of engineers and designers to build, test, analyze and assemble the entire vehicle virtually resulting in considerable savings.

With today's announcement – Nemo will integrate Windchill PLM in order to manage a variety of data and enhance process levels and efficiency, achievements that followed a comprehensive evaluation and review of its systems based on usability, maintainability and cost factors.

"From the very beginning Pro/ENGINEER has helped us design and engineer an incredible vehicle," said Jaques Rancourt, General Manager, NEMO. "We believe that BRT's expertise with implementing an integrated product development and manufacturing system around Windchill will help us transition to and excel at full industrial manufacturing of our electric vehicles."

"In a tough economic environment with markets pushing for better greener products, innovative automotive companies like NEMO can benefit from adopting lean product development techniques by accelerating PTC's Windchill and Pro/ENGINEER deployment" said Marco Bertolucci, President, BRT Solutions. "We're committed to providing best-in-class, easy-to-use and scalable solutions that help customers to leverage their technology investment to gain competitive advantage."

About Nemo

Nemo has been researching durable solutions to preserve the environment for upcoming generations. They have gathered specialists from different fields in order to develop, create and manufacture a new type of vehicle that uses a clean renewable energy source – electricity. www.nev-nemo.com

About BRT Solutions

BRT Solutions is a leading Canadian-based technology consulting firm that sells, develops and implements product lifecycle management (PLM) and product development software solutions and services for manufactures of all sizes. Employing

over 50 engineering professionals in their Montreal, Toronto, Calgary, Edmonton and Vancouver offices, BRT Solutions offers a range of product development solutions including PTC's Pro/ENGINEER, Windchill PLM, ProductPoint, Mathcad, Arbortext and are specialists in collaboration tools, application integration/implementation, manufacturing solutions and certified training. www.brt-solutions.com
